Please delete the present Abstract of the Disclosure.

Please add the following new Abstract of the Disclosure:

The present invention provides an amplifying circuit capable of accomplishing high-impedance input/output, and providing a high gain ~~in~~and low power consumption. The amplifier 208 amplifies a signal received through an input terminal ~~IN~~, and outputs the signal through an output terminal ~~OUT~~. A control circuit comprised of the inductors 203 ~~and 204~~, and the switches 209 ~~and 210~~ turns input/output impedances of the amplifier 208 into a high impedance.
